

Acemannan

Mind Body & Spirit has an Aloe Vera gel concentrate like no other aloe on the market. Nothing can equal the healing properties of its broad spectrum polysaccharide and Acemannan content. These two factors provide significant immune enhancement and antiviral activity along with a significant tonic and anti-ulcer effect on the gastrointestinal tract.

Aloe's active ingredient, Acemannan, is partially if not fully removed by most manufacturers during their processing phase. Many of the preservatives added to Aloe products for bacterial control are toxic thus outweighing the benefits and preventing the consumer from receiving the potential benefits of an oral Acemannan powder.

The secret to healing aloe gel is in the processing that preserves the full range of molecular size of the biological polysaccharide molecules:

Our Acemannan has the full range of the molecular weight polysaccharides (biological sugars). The varying sizes determine their healing properties:

1. Small from 50 to 600 molecules per polysaccharide. Reduces inflammation-- which is involved in a variety of serious conditions. Also helps with the reduction of blood sugar with both type I and II diabetes.
2. Medium up to 1500 molecules per polysaccharide. Are very effective intracellular antioxidants and free radical scavengers--very important in preventing and treating an array of potential conditions. With the ever increasing pollution on the planet and loss of nutrients in the soil, the increase in free radicals and loss of cellular oxygen will only become worse with time. This makes Acemannan's mucilaginous polysaccharides even more important.
3. Larger up to 5,000 molecules per polysaccharide. Has a direct anti-bacterial and anti-viral effect. Important with all the new infectious diseases cropping up.
4. Very large up to 9,000 molecules per polysaccharide. The very large molecules are immune modulating, which have a powerful healing effect on many different immune system disorders like cancer.

Aloe has been used topically and ingested for thousands of years. Our Acemannan production begins in the early morning hours, when the sun has yet to rise, and our expert organic farmers carefully begin to harvest the world's best Aloe by hand, no machines are used. Our precious Aloe is carefully packed and brought to the factory to be concentrated that same morning, thus guaranteeing the highest potency, purity, and freshness. Raw, organic, no preservatives and grown on pristine volcanic rich soil off the coast of an island.

1/8 of a teaspoon recommended as daily dose in water or under the tongue.
