

Here's a simple introduction any one can do and it's recommended by the company to share about the product in this way.

What is Laminine?

It's simply referred to as 'young tissue extract'.

What does it do for your body?

Laminine brings your body back into balance like no other food we know of.

What causes the imbalance in the first place?

The universal cause for all disease or dis-ease -- STRESS. In all its many forms. Diet, toxins, the environment, your work, relationships etc. We all know about stress.

What does the body do besides tense up and freak out under stress?

It makes lots of stress hormone called *cortisol* that causes all sorts of physiological imbalances in the body like immune suppression, insulin resistance, obesity, inflammation and guess what all those things lead to chronic degenerative disease.

Guess what Laminine has been clinically proven to do?

Lower cortisol levels by as much as 50%. Yes the hormone that when constantly produced throws the body out of balance.

What else does Laminine do?

It delivers amino acid complexes that trigger ideal brain and CNS function. The components to facilitate the function of the Master regulator of the body. Remember that if you fix the brain you fix the body and that's what we are seeing. Better focus and mental clarity. Mood enhancement and greater recall (memory). Deeper healing sleep. An overall sense of well being. I think you can get the picture.

The body is the miracle and Laminine is the delivery mechanism for that. It's the architect for all that you fortify your body with to repair and rejuvenate whatever is out of balance. It's the transport mechanism with a strong director to assist the body in whatever it needs.

Laminine is very unique and only available through LifePharm Global.

Now for a more complex explanation right out of the company brochure.

WHAT IS LAMININE?

Laminine helps regenerate aging cells while completely nourishing unhealthy cells, supporting their restoration to their original state. Your body has its own repair mechanism, the physical ability to regenerate your own damaged cells. This repair mechanism is alive and well when we were younger, but falters as we age. Laminine unleashes this powerful repair mechanism inside all of us. It will keep your entire family not only healthy, but help them become physically, mentally and emotionally stronger.

HOW DOES IT WORK?

Have you ever wondered how a child physically develops at a dramatic rate? How a young person can exert so much energy and recover almost instantly? Do you also wonder how a child is able to pick up languages so quickly and how they can remember the slightest things?

The answer lies in a compound that is essential in supporting embryonic development called Fibroblast Growth Factor (FGF). While FGF is readily available in the human placenta, its availability diminishes over time, and essentially vanishes as we age. Our body by itself is incapable of producing its own FGF, which it must derive from the food supply. At 14 used up and by 21 it's all gone.

Until now...All-Natural Laminine is believed to be the only other known source of FGF in adults. Research credits FGF with improving neuron functions in your brain, (nerve cell communication, synapses' firing, neurotransmitters flowing)----increasing amino acids and peptides in your cells (your cell is like a little person with an immune system, digestive system, circulatory system all set up to manufacture proteins--enzymes, hormones, neurotransmitters, genetic factors, all the bio-chemicals of life)-----and assigning the proper stem cells to restore your body's organs back to their original state(this is what makes you young again. Stem cell repair and rejuvenation).

A Factory for Anti-Aging Bio-molecules. In contrast to adult cells that utilize GH to stimulate growth, stem cells require embryonic growth factors.

In layman terms, FGF reprograms adult stem cells and amino acids in your body, which make up your natural repair tools, to travel to the areas that need it the most. Once there, these repair tools have the ability to integrate themselves with that particular body part. Their mission then becomes to repair and regenerate the cells and tissue in that location, wherever it is in the body.

As long as the FGF is there, our body's repair mechanisms can be instructed to facilitate in the repair of whatever part of our body that needs the most rehabilitation.

This explains why Laminine has demonstrated a wide range of benefits for different people in varying parts of the body.

Laminine is very unique and only available through LifePharm Global.
